

August 12, 2012

Hello All,

This week was a busy one. The crew was busy preparing for the track removal project all week. Friday morning the crew led by Alan removed the rail for the crews to finish the walking path to the new platforms. Saturday was one of our hottest days and we were busy spiking and cutting the rails for removal. We got most of it spiked, but with the high temps the rail grew too much to cut very much. We also had a crew from the Western Railway Museum and their equipment and also help from Niles Canyon. Thank you to all.

At the end of the day we were all very hot and tired. Sandy had a crew working on the other green machine. Working all day they got half the brakes working. I also finished re-assembling our old rail saw with the help of Sandy.

For next week:

On Monday (8/13) starting at 1pm Alan will lead the crew to take apart a switch for later use. There will probably be a crew working most of the week with Alan. Saturday is also a 0700 start. Check with him if you can help (916-402-2808).

See you out on the line,
Alan ,Chris and Sandy
