

**Sacramento Southern Railroad - MOW Update
March 12, 2013**

Hello All,

Tuesday night Gene and I pulled a rock out of between the duals on the ct. One thing was Mike H pulled the in and out cylinder out of the green machine as it was leaking. It is out for repair now. We were busy though.

Thursday Richard ran the crew and they moved the tie shear with Al's help.

Saturday it was a very small crew of Heather, Harry and myself. We worked on the section gang machine replacing a broken wheel and changing the hydraulic fluid. Harry replaced the spark plug and spark plug wire end. Heather and I discussed the tie shear and what we are going to do to it. We also installed the replacement batteries in the old tamper under warranty and I fixed the light on the man lift and put it away behind the diner.

Saturday, if we can get enough people, we will split into two groups with one drilling ties for the turntable and the other changing ties. Richard and I have a decent job fair after lunch.

See you out on the line,
Alan, Richard and Chris
