

# SSRR SIGNAL DEPARTMENT SIGNAL SHOP REPORT

Date: March 28, 2013

Report No. Signal Shop 2013-11

## Daily Signal Shop Report for March 28, 2013

### Signal Shop Work Day 2013-11

Crew: Jim, Carl, Joe, Michael, Dennis, Gary, Dale

Briefing by: Dale – Signal Engineer

Safety Rule For Today: Rule 70.8 – Protruding Nails

The following was discussed at the Briefing:

State Parks 2013-2014 Strategic Action Plan  
Signal Department BBQ – June 15, 2013

Jim continued the task of listing an inventory of materials, parts and supplies. He developed some additional shelving for the instrument cases located just north of the Office/Shop Container.

Joe, Dennis, Dale and Alan inspected the Griswold Gate Mechanisms located in the SP Erecting Shop. Joe and Dennis inspected the four available and selected the first candidate for restoration. Using a fork lift they transported it to the Signal Shop area.

Dennis continued working on Wabco No. 6 Gate Mechanism. Some additional cleaning was accomplished as well as some painting. Re-assembly was begun before days end. Joe and Gary assisted.

Carl, Michael and Gary worked on restoration of US&S semaphore mechanisms Single B-01 and Double B-01. They have been slowly inspecting the mechanisms, taking notes, applying voltage and observing operation of various moving apparatuses. All this causes much helpful and enlightening discussion.

The Signal Engineer ran around trying to stay out of trouble and was able to accomplish some administrative paper pushing.

“Beans” was held at the local Big Mac Store. Gary beaned up on the usual bowl of green stuff. (I keep telling myself I should do that too!)

Another very productive and fun day for all.

Respectively Submitted.

Dale  
Signal Engineer
